1. OVERVIEW

CLAA260WU09 is 25.5" color TFT-LCD (Thin Film Transistor Liquid Crystal Display) module composed of LCD panel, driver ICs, control circuit and backlight. By applying 8 bit digital data (6 bit +Hi-FRC), 1920x1200, 16.7M-color images are displayed on the 25.5" diagonal screen. Input power voltage is 5.0V for LCD driving.. General specifications are summarized in the following table:

ITEM	SPECIFICATION
Display Area(mm)	550.08(H)x343.8(V)
Number of Pixels	1920(H)x1200(V)
Pixel Pitch(mm)	0.2865(H)x0.2865(V)
Color Pixel Arrangement	RGB vertical stripe
Display Mode	normally white, TN
Number of Colors	16.7M (6 Bit +Hi-FRC)
Brightness(cd/m ²)	400 cd/m ² (Typ.)(Center point, Lamp current=6 mA)
Viewing Angle	170 / 160 (Typ.)
Surface Treatment	Anti-glare/Hard coating
Power consumption(W)	72.5 (Typ.)
Module Size(mm)	582(W)x375.6(H)x41.5(D)(max)
Module Weight(g)	3700(typ)
Backlight Unit	CCFL, 6 tubes

2. ABSOLUTE MAXIMUM RATINGS

ITEM	SYMBOL	MIN.	MAX.	UNIT	REMARK
Power Supply Voltage for LCD	VCC	0	6	V	
Lamp Voltage	Harrison	VL	1760	Vrms	
	Delta	VL	1540	Vrms	
Lamp Current	Harrison	ILO	3	mArms	*4). 7)
	Delta	ILO	3	mArms	
Lamp Frequency	FL	40	70	kHz	
static electricity	VESDt	-200	200	V	*5)
	VESDc	-8000	8000	V	
Operation Temperature	Top	0	50	°C	*1). 2). 3). 6)
Storage Temperature	Tstg	-20	60	°C	*1). 2). 3)
Delayed Discharge Time	TD	--	1	Sec	*8)

[Note]

- 1).The relative temperature and humidity range are as below sketch, 90%RHMax.($T_a \leq 40^\circ\text{C}$).
- 2).The maximum wet bulb temperature $\leq 39^\circ\text{C}$ ($T_a > 40^\circ\text{C}$) and without dewing.
- 3).If you use the product in a environment which over the definition of temperature and humidity too long to effect the result of eye-aching.
- 4).The life time of the lamp is related to the current of the lamp, so please according to the description of the “(b) backlight” on page 7.
- 5).Test Condition: IEC 1000-4-2
VESDt: Contact discharge to input connector; VESD_C: Contact discharge to module
- 6).If you operate the product in normal temperature range, the center surface of panel should be under 60°C .
- 7).When lamp current is out of the absolute maximum range, the life will fall rapidly or shown unusual sign.
IL min 2mA only for test only, but we can't guarantee the lifetime and performance.
- 8).Delay lighting testing needs the volt above start voltage Vrms. Before the procedure tube needs typical lighting for 1 minute and stay in the temperature $25 \pm 2^\circ\text{C}$ for 24 hours and then testing in the same condition in dark room.

3. ELECTRICAL CHARACTERISTICS

(1).TFT-LCD

Ta=25°C

ITEM	SYMBOL	MIN	TYP	MAX	UNIT	Remark
Power Supply Voltage for LCD	Vcc	4.5	5.0	5.5	V	*1)
Power Supply Current for LCD	Icc	-	1500	2600	mA	*2)
Permissive Input Ripple Voltage	VRP	-	-	100	mVp-p	Vcc=5.0V
Differential impedance	Zm	90	100	110	Ω	
Logic input voltage LVDS:IN+ , IN-	Common Mode Voltage	VCM	1.125	1.25	1.375	V
	Differential Input Voltage	VID	250	350	450	mV
	Threshold Voltage(High)	VTH	-	-	100	mV
	Threshold Voltage(Low)	VTL	-100	-	-	mV
LCD Inrush Current	Inrush			3	A	*4)
Power consumption	P		7.5	13	W	*2)

[Note]

1).VCC-turn-on conditions:

$$0.5\text{ms} \leq t1 \leq 10\text{ms} \quad 1 \text{ sec} \leq t4$$

$$0 < t2 \leq 20\text{ms} \quad 200\text{ms} \leq t5$$

$$0 < t3 \leq 50\text{ms} \quad 200\text{ms} \leq t6$$

Data: RGB DATA, DCLK, DENA

VCC-dip conditions:

CPT

CHUNGHWA PICTURES TUBES, LTD.,

(1) When $3.6\text{V} \leq V_{cc}(\text{min}) < 4.5\text{V}$: $t_d \leq 10\text{ ms}$

2). Circuit condition (Typ.)

$V_{CC}=5.0\text{ V}$, $f_V=60\text{ Hz}$ $f_H=74.1\text{ kHz}$, $f_{CLK}=77\text{ MHz}$

256-Gray :

Circuit condition (MAX.)

$V_{CC}=5.0\text{ V}$, $f_V=60\text{ Hz}$ $f_H=74.1\text{ kHz}$, $f_{CLK}=77\text{ MHz}$

3).LVDS Signal definition:

$$VID = VIN_+ - VIN_- ,$$

$$\Delta VCM = | VCM_+ - VCM_- | ,$$

$$\Delta VID = | VID_+ - VID_- | ,$$

$$VID_+ = | VIH_+ - VIH_- | ,$$

$$VID_- = | VIL_+ - VIL_- | ,$$

$$VCM = (VIN_+ + VIN_-)/2 ,$$

$$VCM_+ = (VIH_+ + VIH_-)/2 ,$$

$$VCM_- = (VIL_+ + VIL_-)/2 ,$$

VIN_+ = Positive differential DATA & CLK Input

VIN_- = Negative differential DATA & CLK Input

4).Irush Measurement Condition

(2).Backlight

2. Lamp life time

ITEM		ILO at 3.0 mA		ILO at 6.0 mA		ILO at 8.0 mA	UNIT	REMARK
Lamp life Time	Harison	Min. 50,000		Min. 50,000		Min. 30,000	hr	Continuous Operation *3)
	Delta	Min. 60,000		Min. 50,000		Min. 35,000		
Rated time (turn on/off)		—		Min.100,000		—	time	*4)

[Note] Measuring inverter Type : Logah (力銘) MIT68013.50 、 Ampower (寰永) T39I012.00

If the waveform of light up-driving is asymmetric, the distribution of mercury inside the lamp tube will become unequally or will deplete the Arm gas in it. Then it may cause the abnormal phenomenon of lighting-up. Therefore, designers have to try their best to for fill the conditions under the inverter designing-stage as below:

- The degrees of unbalance : $< 10\%$
- The ratio of wave height : $< \sqrt{2} \pm 10\%$

I_p : high side peak

$I-p$: low side peak

A : The degrees of unbalance = $|I_p - I-p| / I_{rms} \times 100 (\%)$

B : The ratio of wave height = $I_p \text{ (or } I-p) / I_{rms}$

1) Lamp Current measurement method (The current meter is inserted in cold line)

2) a. Frequency in this range can mala the characterisitics of electric and optics maintain in +/- 10% except hue.

b. If the lamp frequency can be maintain in 62~68KHz, the better charactristics of the electrical and the optical can be presented.

c. If the operating frequency is 40~70 KHz, the life time and the reliability of the lamp will not be affect.

d. Lamp frequency of inverter may produce interference with horizontal synchronous frequency, and this may cause horizontal beat on the display. Therefore, please adjust lamp frequency, and keep inverter as far from module as possible or use electronic shielding between inverter and module to avoid the interference.

3) Definition of the lamp life time : Luminance (L) under 50% of specification starting lamp voltage or starting lamp voltage is more than 130% of the initial value

4) The condition of Turn-on and Turn-off operation is as below:

a. Lamp current is 6.0mA

b. Frequency is 10 sec.(on)/10 sec.(off)

c. Repeat it for 10 thousand times

d. The result of eye-etching of the lamp hue is normal, and can switch the lamp.

It should not have motion fail when starting lamp voltage is lower than 130% of the initial value.

5) It is necessary to consider the maximal value when design inverter , in order to assure lighting.

6) The equation of power consumption $WL = IL \times VL \times 6$ ($IL = 6.0\text{mA}$, $Ta = 25^\circ\text{C}$)

[Note]

1) Definition of gray scale: Color (n): n indicates gray scale level.

Higher n means brighter level.

2) Data: 1-High, 0-Low.

3) This assignment is applied to both odd and even data.

[Notes]

Setup of Measurement Equipment

The LCD module should be turn-on to a stable luminance level to be reached. The measurement should be executed after lighting Backlight for 20 minutes and in a dark room.

(1) Equipment: BM-5A (TOPCON) under the dark room condition (2° view angle) after more than 30 minutes turning on the lamp.

(2) Condition: IL=6.0 (each lamp) mA, Inverter: Logah (力銘) MIT68013.50、Ampower (寰永) T39I012.00, Frequency=65 kHz.

*1).Definition of Contrast Ratio:

CR=ON (White) Luminance/OFF (Black) Luminance

*2).Definition of Luminance and Luminance uniformity:

Center Luminance: measuring the luminance of the point no. 5

Average Luminance: measuring average luminance of points no.1-no.9

Uniformity: $\Delta L = [L(\text{Min})/L(\text{Max})] \times 100\%$

*3).Definition of viewing Angle (θ, ψ):

*4) Definition of Response Time (Tr, Tf):

*5) Definition of crosstalk:

$$CT = |Y_B - Y_A| / Y_A \times 100 (\%)$$

Y_A : The luminance of measured position at pattern A

Y_B : The luminance of measured position at pattern B with Gray level

Pattern A

Pattern B

*6) Definition of Gamma (γ), follow VESA standard sampling every 16 gray level(0,16,32,...,224,240,255)

CPT

CHUNGHWA PICTURES TUBES, LTD.,

*7) Definition of Response Time ($T_{\text{GtG_AVE}}$):

$T_{\text{GtG_AVE}}$ is defined as the total average response time for “Gray to Gray”.

The Gray to Gray response time is defined as following chart.

Gray to Gray		Rising Time								
Falling Time		0	32	64	96	128	159	191	223	255
	0									
	32									
	64									
	96									
	128									
	159									
	191									
	223									
	255

9. RELIABILITY TEST CONDITIONS

(1) Temperature and Humidity

TEST ITEMS	CONDITIONS
HIGH TEMPERATURE HIGH HUMIDITY OPERATION	50°C ; 90%RH; 240h (No condensation)
HIGH TEMPERATURE HIGH HUMIDITY STORAGE	60°C ; 90%RH;48h (No condensation)
HIGH TEMPERATURE OPERATION	50°C ; 240h
HIGH TEMPERATURE STORAGE	60°C ; 240h
LOW TEMPERATURE OPERATION	0°C ; 240h
LOW TEMPERATURE STORAGE	-20°C ; 240h
THERMAL SHOCK	BETWEEN -20°C (1hr)AND 60°C (1hr); 100 CYCLES

(2) Shock & Vibration

ITEMS	CONDITIONS
SHOCK (NON-OPERATION)	Shock level:1470m/s ² (150G) Waveform: half sinusoidal wave, 2ms Number of shocks: one shock input in each direction of three mutually perpendicular axes for a total of six shock inputs
VIBRATION (NON-OPERATION)	Vibration level: 9.8m/s ² (1.0G) zero to peak Waveform: sinusoidal Frequency range: 5 to 500 Hz Frequency sweep rate: 0.5 octave/min Duration: one sweep from 5 to 500Hz in each of three mutually perpendicular axis(each x,y,z axis: 1 hour, total 3 hours)

(3) ESD

POSITION	CONDITION(MDL turn off)
Connector	1. 200 pF , 0 Ω , $\pm$ 250 V 2. contact mode for each pin
Module	1. 150 pF , 330 Ω , $\pm$ 15K V 2. Air mode, test 25 times for each test point 3. Contact mode, 25 times for each test point

(4) Low Pressure test

TEST ITEM	CONDITION
Low Pressure test(storage)	260HPa (30000 ft.) ; 24 Hr

(5) Judgment standard

The judgment of the above test should be made as follow:

**CPT****CHUNGHWA PICTURES TUBES, LTD.,**

Pass: Normal display image with no obvious non-uniformity and no line defect. Partial transformation of the module parts should be ignored.

Fail: No display image, obvious non-uniformity, or line defects.

CPT

CHUNGHWA PICTURES TUBES, LTD.,

10. PACKING SPECIFICATION

(1)Packing

- 5 LCD modules (max.) / 1 Box
- 6 box (max.) / 1 pallet
- Box dimensions: 775(L)×365(W)×485(H)
- Weight: approximately 21Kg (5 modules per box)

(2)Packing Method

Figure (a) and (b) are the packing method

Figure (a) packing method

CPT

CHUNGHWA PICTURES TUBES, LTD.,

Cover Protector: L950 × 50 × 50mm

Pallet: 1150(L) × 800(W) × 130(H) mm

Top/Bottom Cap: L1150 × 800 × 130mm

Pallet stack: 1150(L) × 800(W) × 1120(H) mm

Gross Weight: 136Kg(±2Kg)

Figure (b) packing method

11. HANDLING PRECAUTIONS FOR TFT-LCD MODULE

Please pay attention to the followings in handling- TFT-LCD products;

(1) ASSEMBLY PRECAUTION

- 1) Please use the mounting hole on the module side in installing and do not beading or wrenching LCD in assembling. And please do not drop, bend or twist LCD module in handling.
- 2) Please design display housing in accordance with the following guide lines.
 - a) Housing case must be destined carefully so as not to put stresses on LCD all sides and not to wrench module. The stresses may cause non-uniformity even if there is no non-uniformity statically.
 - b) Keep sufficient clearance between LCD module back surface and housing when the LCD module is mounted. Approximately 1.0 mm of the clearance in the design is recommended taking into account the tolerance of LCD module thickness and mounting structure height on the housing.
 - c) When some parts, such as, FPC cable and ferrite plate, are installed underneath the LCD module, still sufficient clearance is required, such as 0.5mm. This clearance is, especially, to be reconsidered when the additional parts are implemented for EMI countermeasure.
 - d) Design the inverter location and connector position carefully so as not to give stress to lamp cable, or not to interface the LCD module by the lamp cable.
 - e) Keep sufficient clearance between LCD module and the others parts, such as inverter and speaker so as not to interface the LCD module. Approximately 1.0mm of the clearance in the design is recommended.
- 3) Please do not push or scratch LCD panel surface with any-thing hard. And do not soil LCD panel surface by touching with bare hands. (Polarizer film, surface of LCD panel is easy to be flawed.)
- 4) Please do not press any parts on the rear side such as source TCP, gate TCP, control circuit board and FPCs during handling LCD module. If pressing rear part is unavoidable, handle the LCD module with care not to damage them.
- 5) Please wipe out LCD panel surface with absorbent cotton or soft cloth in case of it being soiled.
- 6) Please wipe out drops of adhesives like saliva and water on LCD panel surface immediately. They might damage to cause panel surface variation and color change.
- 7) Please do not take a LCD module to pieces and reconstruct it. Resolving and reconstructing modules may cause them not to work well.
- 8) Please do not touch metal frames with bare hands and soiled gloves. A color change of the metal frames can happen during a long preservation of soiled LCD modules.
- 9) Please pay attention to handling lead wire of backlight so that it is not tugged in connecting with inverter.

(2) OPERATING PRECAUTIONS

- 1) Please be sure to turn off the power supply before connecting and disconnecting signal input cable.
- 2) Please do not change variable resistance settings in LCD module. They are adjusted to the most suitable value. If they are changed, it might happen LCD does not satisfy the characteristics specification.
- 3) Please consider that LCD backlight takes longer time to become stable of radiation characteristics in low temperature than in room temperature.
- 4) A condensation might happen on the surface and inside of LCD module in case of sudden change of ambient temperature.
- 5) Please pay attention to displaying the same pattern for very long time. Image might stick on LCD. If then, time going on can make LCD work well.
- 6) Please obey the same caution descriptions as ones that need to pay attention to ordinary electronic parts.

(3) PRECAUTIONS WITH ELECTROSTATICS

- 1) This LCD module use CMOS-IC on circuit board and TFT-LCD panel, and so it is easy to be affected by electrostatics. Please be careful with electrostatics by the way of your body connecting to the ground and so on.
- 2) Please remove protection film very slowly on the surface of LCD module to prevent from electrostatics occurrence.

(4) STORAGE PRECAUTIONS

- 1) When you store LCDs for a long time, it is recommended to keep the temperature between 0°C ~40°C without the exposure of sunlight and to keep the humidity less than 90%RH.
- 2) Please do not leave the LCDs in the environment of high humidity and high temperature such as 60°C 90%RH.
- 3) Please do not leave the LCDs in the environment of low temperature; below -20°C.

(5) SAFETY PRECAUTIONS

- 1) When you waste LCDs, it is recommended to crush damaged or unnecessary LCDs into pieces and wash them off with solvents such as acetone and ethanol, which should later be burned.
- 2) If any liquid leaks out of a damaged-glass cell and comes in contact with the hands, wash off thoroughly with soap and water.

(6) OTHERS

- 1) A strong incident light into LCD panel might cause display characteristics' changing inferior because of polarizer film, color filter, and other materials becoming inferior. Please do not expose LCD module direct sunlight and strong UV rays.
- 2) Please pay attention to a panel side of LCD module not to contact with other materials in preserving it alone.
- 3) For the packaging box, please pay attention to the followings:

- a) Packaging box and inner case for LCD are designed to protect the LCDs from the damage or scratching during transportation. Please do not open except picking LCDs up from the box.
- b) Please do not pile them up more than 5 boxes. (They are not designed so.) And please do not turn over.
- c) Please handle packaging box with care not to give them sudden shock and vibrations. And also please do not throw them up.
- d) Packing box and inner case for LCDs are made of cardboard. So please pay attention not to get them wet. (Such like keeping them in high humidity or wet place can occur getting them wet.)
